

GAF-ELK WEATHERWATCH®

- **Keeps Water Out...**Creates a 100% watertight seal
- **Safer Installation...**SlipGuard™ granular surface improves footing
- **Helps Eliminate Waste...**Special adhesive allows for one-time repositioning, but aggressively adheres over time
- **Dependable...**Self-seals around nails
- **Saves Labor...**Split-back release film peels off in layers for faster installation
- **Looks Better...**Fiberglass reinforcement helps resist wrinkling and buckling
- **Convenient...**1.5 and 2.0 square roll sizes

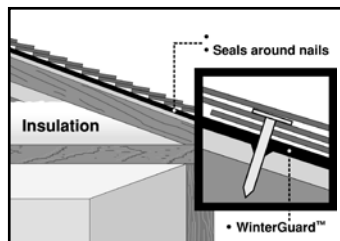

GAF-ELK STORMGUARD®

- **Keeps Water Out...**Creates a 100% watertight seal
- **Safer Installation...**Unique film surface pattern improves footing — even in hot weather
- **Helps Eliminate Waste...**Special adhesive allows for one-time repositioning, but aggressively adheres over time
- **Dependable...**Self-seals around nails or metal roofing fasteners
- **Saves Labor...**Split-back release film peels off in layers for faster installation
- **Looks Better...**Fiberglass reinforcement helps resist wrinkling and buckling
- **Convenient...**2.0 square roll size
- **Versatile...**High temperature compound is suitable for most use under metal applications

CERTAINTED WINTERGUARD™ WATERPROOFING SHINGLE UNDERLAYMENT

WinterGuard™ shingle underlayment is installed between the roof deck and the shingles, creating a weather-tight barrier that prevents backed-up water from getting into the home.

TAMKO MOISTURE GUARD PLUS®

ICE & RAIN PROTECTIVE UNDERLAYMENT

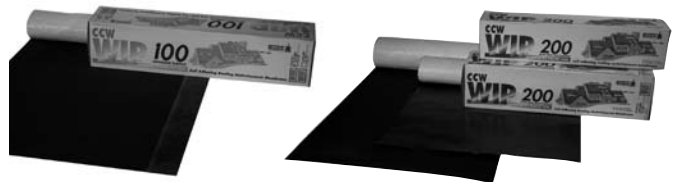

Moisture Guard Plus® is a self-adhering modified bitumen underlayment sheet for prevention of water penetration caused by wind-blown rain or ice damming. Use on roof decks as a waterproofing underlayment; at rakes, eaves, valley and ridges. Moisture Guard Plus® is a self-adhering membrane that features a strong fiberglass mat, SBS modified asphalt, split plastic release film and fine mineral surfacing for enhanced skid resistance. Adheres directly to plywood roof decks.

CARLISLE SELF-ADHERING ROOFING UNDERLAYMENTS

Carlisle Residential's Water and Ice Protection (WIP) self-adhering roofing underlayments offer an ideal solution for protection against water and ice damming while withstanding some of nature's most unfavorable weather conditions.

- **WIP 100** is a flexible, rubberized asphalt, fiberglass-reinforced member with a granular surface for maximum skid resistance. Available in 1-, 1 1/2- and 2-square rolls
- **WIP 200** is a composite membrane comprised of fiberglass-reinforced, rubberized asphalt laminated to an impermeable polyethylene film layer. Available in 2-square rolls

Ice & Water Protection

GRACE ICE & WATER SHIELD®

A self-adhered membrane roofing underlayment offering premium leak protection for sloped roofs subject to the effects of ice dams or wind-driven rain. The membrane is designed to be applied to the roof deck prior to the application of the finished roof coverings, including shingles, tile and metal.

GRACE ULTRA

Grace Ultra is designed to protect sloped roofs from the effects of wind-driven rain and ice dams in applications where the membrane must withstand high, in-service temperatures for extended periods of time. This membrane is excellent in hot desert southwest climates, where superior heat resistance is a requirement. The membrane meets or exceeds key performance requirements for self-adhered roofing underlayments used in severe climates.

GRACE SELECT

Grace Select is a high performance, easy-to-apply, economical underlayment designed for use in wind driven rain applications and ice dams where code based standards of protection are sufficient. The product is economical and easy to apply.

GRACE BASIK®

Grace Basik® is a granular surfaced, self adhered, roofing underlayment which provides economical, easy-to-apply protection from damage caused by wind driven rain and ice dams. The product is suitable for application under traditional roof coverings requiring protection from the wind driven rain of strong storms and provides code based standards of protection from ice dams in moderate climates. Grace Basik® is backed by a split plastic release liner that protects its adhesive quality. The liner is easily removed allowing the rubberized asphalt to be bonded to the roof deck.

GRACE ROOF DETAIL MEMBRANE®

Grace Roof Detail Membrane is the only product available today designed specifically for waterproofing critical roof detail areas. Based on the Grace Ice & Water Shield technology, Grace Roof Detail Membrane is a fully adhered, flexible product that conforms tightly to common roof details such as skylights, chimneys and dormer walls. Available in convenient pre-cut strips in 9 in. and 18 in. widths, it is the optimal choice for valleys and transition areas such as ridges, rake edges and drip edges.

Roof it right.®

GRACE TRI-FLEX®

Recommended for all commonly used roofing materials, including metal roofing systems, Grace Tri-Flex® is an innovative synthetic roofing underlayment with a layer of UV stabilized polypropylene on both sides. This technology, available only from Grace, creates a very durable and tough weather resistant fabric. Designed to overcome the shortcomings of traditional felt underlayments, it has excellent tear resistance, is designed to withstand even the strongest wind conditions and can be left exposed for up to six months.

Flash it right.™

GRACE VYCOR® PLUS SELF-ADHERED FLASHING

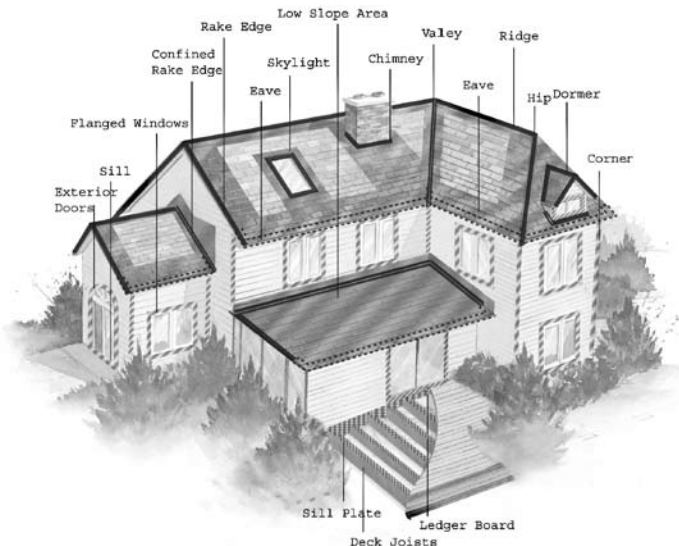

A highly-conformable, easy to detail weather-resistive barrier that provides premium protection against leaks that traditional building papers, felts and house wraps can't match. Grace Vycor Plus can be used in all vulnerable non-roof flashing details before installing exterior finish coverings. Fully adheres to the substrate, seals around fasteners and prevents water from passing through and into the structure.

Deck it right.™

GRACE VYCOR DECK PROTECTOR®

Grace Vycor Deck Protector is the first membrane uniquely formulated and tested to help provide corrosion protection to galvanized connectors in contact with the new pressure-treated wood, restoring levels to those historically found with CCA wood. It also helps reduce corrosion rates of galvanized fasteners.
